

Prioritise entry-to-benefit support for migrant construction workers, subject to a 90-day feasibility test.

Target: low-income migrant construction workers in Greater Mumbai, particularly naka/day-labour and short-tenure workers without a cooperative contractor. Both options are judged on incremental benefits received.

WHERE WORKERS DROP OUT

DATA | **~28K**

Active Greater Mumbai BOCW registrations

Jul 2023: 28,206 | May 2026: 27,680

EST. | **~1.3–4.5 lakh**

Estimated eligible migrant construction workers in Greater Mumbai

Assumption-based; not an administrative count.

Registrations stayed broadly flat from Jul 2023 to May 2026 despite substantial statewide growth.

Consistent with a substantial entry gap; size uncertain.

TWO PRIORITY BARRIERS

BARRIER 1 | ENTRY

Workers without a cooperative contractor lack a predictable way to prove eligibility and complete BOCW verification.

Mechanism No reliable certifier → uncertain 90-day proof → verification burden + wage loss → incomplete / non-attempted application → no registration → no benefits.

DATA | YUVA, historical MMR: 24.64% site workers registered vs 3.32% naka/independent workers.

Alternative municipal / self-declaration routes exist; current Mumbai-scale acceptance is unknown.

BARRIER 2 | CONVERSION

After registration, no actor consistently owns the worker journey from claim to benefit receipt.

Mechanism Registered → claim → query / rejection → follow-up → approval → payment / receipt → renewal.

DATA | CAG, Maharashtra-wide, pre-RTS: 5.94 lakh claims; 58% settled; 39% rejected; 3% pending; 60% of approvals >1 year; 24% had not received kits.

Greater Mumbai post-RTS claim outcomes remain unknown.

RECOMMENDATION | OPTION 1, CONDITIONAL Prioritise Entry & First-Benefit Support.

- Why:
- Larger addressable population
 - Stronger Mumbai-specific entry evidence
 - Stronger causal evidence on assisted-access mechanisms

Condition: Proceed only if proof acceptance + verification capacity are secured within 90 days. If not, favour Option 2, subject to individual-level IWBMS access.

TWO INTERVENTION OPTIONS | ₹5 CRORE | 24 MONTHS

Base cases are illustrative assumptions, not observed results.

PREFERRED OPTION 1 | ENTRY & FIRST-BENEFIT SUPPORT

Target Unregistered eligible migrant construction workers, prioritising naka / short-tenure workers.

Path Find eligible workers → establish accepted proof → complete verification → register → first claim → benefit receipt

Activities Screen at nakas; proof desks; verification camps; first-claim tracking; renewal reminders.

Technology Supporting | **EST.** 7% of budget. Case tracker for documents, appointments, IWBMS, claims.

EST. ~55K screened → ~14.6K registered → ~10.2K receive ≥1 benefit

EST. ~1.2K counterfactual → **CALC.** **~9K incremental** **CALC.** **~₹5.6K / incremental recipient**

MAKE-OR-BREAK Accepted proof protocol + verification capacity

FALLBACK OPTION 2 | CLAIMS-TO-RECEIPT CASE MANAGEMENT

Target Existing and lapsed Greater Mumbai BOCW registrants.

Path Locate → entitlement → claim → query follow-up → escalation → receipt → renewal

Activities Locate registrants; identify entitlements; prepare claims; monitor queries; escalate delays; track payment; support renewal.

Technology Central | **EST.** 13% of budget. Case management, SLA timers, ageing dashboard, worker communication.

EST. ~30K enrolled → ~10.3K gross → **CALC.** **~6.8K incremental** **CALC.** **~₹7.4K / incremental recipient**

MAKE-OR-BREAK IWBMS data access + contactable registrants

NOW → 90-DAY TESTS → PASS: OPTION 1 | FAIL: FAVOUR OPTION 2, SUBJECT TO DATA ACCESS

WHAT WE WOULD TEST IN THE FIRST 90 DAYS

Test designs are proposed; thresholds are decision gates.
